

IN THE CLAIMS:

Please amend Claims 23, 24, 26, and 27 as indicated below. The following is a complete listing of claims and replaces all prior versions and listings of claims in the present application:

---

Claims 1-22 (canceled)

Claim 23 (currently amended): A data processing apparatus connectable to a LAN, comprising:

an input unit, adapted to input data;

a storage unit, adapted to store the data inputted by said input unit;

an identification unit, adapted to obtain user information about a user for whom the data inputted by said input unit was received;

a transfer unit, adapted to transfer the data inputted by said input unit to a terminal connected to the LAN when it is impossible to store the data inputted by said input unit in said storage unit; and

a generation unit, adapted to generate a predetermined notification, based on the user information obtained by said identification unit, to notify the user that the data has been transferred by said transfer unit, the notification including information indicating the terminal to which the data is transferred by said transfer unit.

Claim 24 (currently amended): A data processing apparatus according to  
Claim 23, ~~further comprising~~, a wherein said storage unit[[,]] is adapted to store information  
used to discriminate to which terminal the data is transferred by said transfer unit.

Claim 25 (previously presented): A data processing apparatus according to  
Claim 23, wherein said transfer unit transfers the data inputted by said input unit when a printer  
for printing the data is in an error state.

Claim 26 (currently amended): A method of controlling a data processing  
apparatus connectable to a LAN, comprising the steps of:

inputting data;  
storing the data inputted in said inputting step in a storage unit;  
obtaining user information about a user for whom the data inputted in said  
inputting step was received;  
transferring the data inputted in said inputting step to a terminal connected to  
the LAN when it is impossible to store the data inputted in said inputting step in the storage unit;  
and

generating a predetermined notification, based on the user information  
obtained in said obtaining step, to notify the user that the data has been transferred in said  
transferring step, the notification including information indicating the terminal to which the data  
is transferred in said transferring step.

Claim 27 (currently amended): A computer-readable storage medium storing a program for implementing a method of controlling a data processing apparatus connectable to a LAN, wherein the method comprises the steps of:

inputting data;

storing the data inputted in said inputting step in a storage unit;

obtaining user information about a user for whom the data inputted in [[the]]  
said inputting step was received;

transferring the data inputted in said inputting step to a terminal connected to  
the LAN when it is impossible to store the data inputted in said inputting step in the storage unit;  
and

generating a predetermined notification, based on the user information  
obtained in said obtaining step, to notify the user that the data has been transferred in said  
transferring step, the notification including information indicating the terminal to which the data  
is transferred in said transferring step.
